

Dr. Ali Rashid's Dental Clinic

Clinic Management Website & Patient Portal

Master Blueprint: everything discussed, decided and planned

Prepared 5 October 2026 | Version 1.0 (for print and review)

How to read this document: Sections 1 to 27 describe the full system. Section 28 is the decisions log (agreed, skipped, later). Section 29 lists the open questions still needed from Dr. Ali. Section 30 is the build plan and next actions. Items marked **[TO CONFIRM]** are assumptions or gaps that need your answer before they are built.

Contents

1. Vision and goals
 2. Platform, hosting and costs
 3. Branches
 4. Homepage (public)
 5. Visitor section
 6. Patient portal
 7. Employee roles overview
 8. Access control (checkbox permissions grid)
 9. Patient records and Mr# generation
 10. Visits and branch tagging
 11. Aaj ki List: sheet-style interface
 12. Live walk-in queue
 13. Braces treatment module (month-by-month protocol)
 14. Doctor groups
 15. Retainer module (in-house)
 16. Doctor daily log and doctor accounts
 17. Photos workflow and editing
 18. Pending dues, the \$\$ flag and the treatment hold
 19. Invoices, installments and receipts
 20. Accountant module: income, expenses, branch P&L
 21. Discounts, refunds and money protection
 22. Clinic coordinator module
 23. Complaints system
 24. Dr. Ali Rashid review flag
 25. Inventory
 26. Dashboards, reporting and growth tracking
 27. Data migration, export and backups
 28. Decisions log
 29. Open questions
 30. Build plan, timeline and next actions
- Appendix A: Security plan
- Appendix B: Data quality fixes found in current sheets

1. Vision and goals

One browser-based system that replaces Healthwire completely and replaces the daily Google Sheets workflow, while keeping the speed and feel of Google Sheets that the team already relies on.

- Single source of truth for every patient, visit, treatment, photo, X-ray, invoice, payment and expense across all branches.
- Built around how the clinic actually works: mostly walk-in appointments, token numbers, the daily Aaj ki List.
- Clear branch-wise income and expenses, so every branch's real performance is visible.
- Braces protocol enforced by the system, not by memory: right doctor group, right wire, photos on time, extraction and dues rules.
- Every staff member sees only what they need; Dr. Ali decides who gets what access.
- Patients get their own login to see their invoices, X-rays and progress photos, and can complain directly to Dr. Ali.
- Visitors see why to start treatment here, the braces offered, and consented before/after results.
- Mobile, tablet and desktop friendly. Browser only: no app to install.

2. Platform, hosting and costs

2.1 Decisions

- **Browser only.** No Android/iOS app. Works on phone, tablet and desktop browsers.
- **Fully responsive.** Every screen is designed for mobile + tablet + desktop, including the sheet view.
- **Replaces Healthwire entirely.** No API expected from Healthwire; the clinic builds its own system.
- **Auto-save everywhere,** like Google Sheets: every cell/field saves as it is typed.
- **Offline buffer:** if the internet drops (load-shedding, outages), entries are held on the device and synced when the connection returns.

2.2 Technology stack

Piece	Purpose	Status	Approx. cost
Supabase	Database, staff and patient logins, file storage (photos, X-rays), per-role security rules	Connected to Claude	Free to start; about \$25/month in production
Vercel	Hosts the website itself	Account still to be created (use Sign Up, then Continue with GitHub)	Free to start; about \$20/month on Pro
GitHub	Stores the website code and its history	Account to create; Claude attaches the repository	Free
Domain dralirashid.com	Website address and staff email domain	[TO CONFIRM] whether already owned	Yearly domain fee
Google Workspace	Doctor/staff emails like name@dralirashid.com	To set up	Billed per user per month; to be priced at that stage
Email sending service	Sending photos, invoices and receipts by email	To choose during build	Low; free tiers often enough at start

Costs above are approximate and can change; they will be confirmed before anything is purchased.

2.3 What Claude does vs what Dr. Ali does

- **Claude:** designs and writes the whole website, database, permissions, sheet view, braces logic, invoices, dashboards; migrates data; edits photos; sets up security.
- **Dr. Ali:** creates accounts (GitHub, Vercel), pays for hosting/domain/emails, signs into Healthwire in the browser for the migration (Claude never types passwords), answers open questions, tests previews, trains Claude on the photo style.
- **Recommended:** once live, a trusted developer (e.g. Rayyan) reviews security as a second pair of eyes.

3. Branches

Every patient visit, payment, expense, photo and report is tagged with a branch and city.

Branch (as in current sheets)	City	Notes
Gulshan KHI	Karachi	Own tab in Aaj ki List
North Nazimabad	Karachi	Own tab in Aaj ki List
DHA KHI	Karachi	Own tab in Aaj ki List
Islamabad	Islamabad	Own tab (third screenshot)
"G..." tab	[TO CONFIRM]	Possibly a Lahore branch; name to confirm
Lahore branch(es)	Lahore	[TO CONFIRM] final list of Lahore branches

- Front desk login offers **5 clinic options** (one per branch). [TO CONFIRM] exact final branch list.
- Branch list is editable by admin, so a new branch can be added later without rebuilding anything.
- City grouping (Karachi / Lahore / Islamabad) is used for expense entry and city-level reports.

4. Homepage (public)

- **Animated 3D smile** as the hero element of the homepage.
- **Three large buttons:**
 - 1. Patient
 - 2. Visitor
 - 3. Employee
- **Dr. Ali's calendar on the homepage:**
 - Clear calendar showing Dr. Ali's days and timings for each city and branch.
 - Patients flagged "see Dr. Ali" can check here which day to come.
 - Updated by admin (and optionally the coordinator) from inside the system.
- Premium, clean, on-brand design consistent with the clinic's luxury look.
- Fast loading on mobile data; the 3D smile must not slow the page down on phones.

5. Visitor section

- Benefits of starting treatment at Dr. Ali Rashid's Dental Clinic.
- The braces types offered, with simple explanations.
- Selected good before/after cases. **Only cases with patient consent** (consent checkbox per photo).
- **"Book free consultation"** button that opens WhatsApp chat (simple link, not automated messaging).

- **Rough cost ranges** for braces types so visitors pre-qualify themselves.
- Branch locations and Dr. Ali's calendar.

6. Patient portal

6.1 Login

- Every patient has their own login credentials.
- Login method: decision postponed. Phone number + OTP was recommended (patients forget passwords; SMS costs a few rupees each). To be decided later.

6.2 What patients see

- Their invoices and payment history, including remaining dues and installment schedule.
- Their X-rays.
- Before/after photos and progress photos (edited versions; raw kept internally).
- Their treatment timeline: visits, dates, treatment done, which doctor.
- Next appointment / braces month information.
- A message if flagged "Please get your next appointment done by Dr. Ali Rashid", with Dr. Ali's calendar.

6.3 Patient actions

- **"Report / Complain to Dr. Ali Rashid" button** on every patient profile (see Section 23).
- **Post-visit rating** (1 to 5) after each visit; low ratings alert the clinic coordinator.

7. Employee roles overview

Role	Main responsibilities
Front desk (one login per branch, 5 branch options)	Patient check-in, new patient entry with branch tag, token numbers, live queue, collecting payments, issuing invoices/receipts, entering pending payment status, seeing \$\$ dues flag, applying discounts within cap, daily cash closing, flagging patients for Dr. Ali
Assistant	Entering patient data and work done, uploading clinic photos, braces visit entries (wire, brackets etc.), seeing the dues hold before treatment, flagging patients for Dr. Ali
Doctors (each with own @dralirashid.com login)	Daily log of patients treated, treatment entries, checker sign-off for braces visits per protocol, viewing their own performance/dashboard
Clinic coordinator	Lab work entries, follow-up reminders, appointment due tracking, missed/drop-off list, complaints inbox, low-rating alerts, \$\$ flag visibility, flagging patients for Dr. Ali
Accountant	All financials across branches, expense entries by city and branch with categories, branch income vs expenses, discount approvals, refunds/invoice edits, cash closing verification, doctor percentage payouts
Admin (Dr. Ali)	Access to everything; sets permissions with the checkbox grid; complaints inbox; Dr. Ali review list; all dashboards; discount caps; branch list; doctor groups

8. Access control (checkbox permissions grid)

- Healthwire-style access list: **every feature is a row, every role (or person) is a column, each cell is a checkbox.**

- Claude drafts the grid with sensible defaults; **Dr. Ali ticks/unticks and has the final say.**
- Permissions can be set per role and overridden per individual if needed.
- Branch restriction: a front desk login can be limited to its own branch's data.
- Instant account shutdown: one click locks a departing employee out of everything.
- Every permission change is recorded in the audit log.

8.1 Draft default grid (to be finalised by Dr. Ali)

Feature	Front desk	Assistant	Doctor	Coordinator	Accountant	Admin
View patient profile	Yes	Yes	Yes	Yes	Yes	Yes
Create new patient / Mr#	Yes	-	-	Yes	-	Yes
Edit patient contact details	Yes	-	-	Yes	-	Yes
Sheet view (Aaj ki List) - view	Yes	Yes	Yes	Yes	Yes	Yes
Sheet view - add/edit entries	Yes	Yes	Own	Yes	-	Yes
Enter treatment done / braces details	-	Yes	Yes	-	-	Yes
Doctor daily log	-	-	Own	-	-	Yes
Upload clinic photos	-	Yes	Yes	Yes	-	Yes
View raw clinic photos folder	-	Yes	Yes	Yes	-	Yes
View X-rays	Yes	Yes	Yes	Yes	-	Yes
See \$\$ pending dues flag	Yes	Yes	Yes	Yes	Yes	Yes
Override dues treatment hold	-	-	-	-	Yes	Yes
Create invoice / take payment	Yes	-	-	-	Yes	Yes
Edit or void invoice / refund	-	-	-	-	Yes	Yes
Give discount within cap	Yes	-	-	-	Yes	Yes
Approve discount above cap	-	-	-	-	Yes	Yes
Daily cash closing	Yes	-	-	-	Verify	Yes
Add expenses	-	-	-	-	Yes	Yes
View all financial reports	-	-	-	-	Yes	Yes
View own branch revenue	[TBD]	-	-	-	Yes	Yes
Doctor percentage / payouts	-	-	Own	-	Yes	Yes
Lab work entries	-	Yes	-	Yes	-	Yes
Follow-up reminders	Yes	-	-	Yes	-	Yes
Complaints inbox	-	-	-	Yes	-	Yes
Flag patient for Dr. Ali	Yes	Yes	Yes	Yes	Yes	Yes
Inventory	-	Yes	-	Yes	Yes	Yes
Export / download data	-	-	-	-	Yes	Yes
Manage users and permissions	-	-	-	-	-	Yes
Audit log	-	-	-	-	-	Yes

"Own" means the person sees or edits only their own records. "[TBD]" means Dr. Ali decides.

9. Patient records and Mr# generation

9.1 Mr# (medical record number)

- Mr# is generated automatically by the website for every new patient.
- New numbers continue from the current highest existing number (currently around 9840), so no collisions with old records.
- Existing numbers are kept exactly as they are, including unusual ones like "347-1" and "208-1".
- Mr# is unique, permanent and cannot be reused or edited by front desk.
- Duplicate check on entry: warns if a patient with the same name + phone already exists.

9.2 Patient profile contents

- Name (clean name only; no branch suffixes like "lhr", "N.N", "lsb").
- Phone number (mandatory), email (optional, used for sending photos/receipts), age/gender, address.
- Medical history and digital consent forms, signed on tablet at first visit.
- "How did you hear about us?" (Instagram, referral, walk-in, Google, etc.).
- Referring doctor (for doctor percentage, if applicable).
- Treatment type(s): braces, retainer, smile makeover, veneers, crowns, RCT, scaling, extraction, implant check, etc.
- Braces month counter and protocol status (Section 13).
- Full visit history: date, branch, treatment done, doctors/assistants involved, notes.
- Photos (raw and edited), X-rays (OPG etc.), lab work, invoices, payments, dues, complaints, ratings.
- Flags: \$\$ pending dues, "See Dr. Ali", photo consent status.

10. Visits and branch tagging

- Current Healthwire habit of naming patients "ABC lhr", "ABC N.N", "ABC lsb" is replaced by a proper branch field.
- Dropdown / checkbox to select the branch on the entry form.
- **Branch is tagged on every visit, not just the patient.** A patient who starts in Lahore and continues in Karachi has each visit's revenue counted for the branch where the work happened. (Agreed.)
- Patient profile shows all branches visited.
- Branch tags feed directly into branch revenue reports.
- A visit can include multiple doctors and assistants (many current sheet rows show 2 or 3 people).

11. Aaj ki List: sheet-style interface

The team uses the Aaj ki List Google Sheet very heavily, so the website gets a Google Sheets-like grid that works the same way: type into cells, tab between them, dropdowns, colours, instant saving.

11.1 Behaviour

- One daily list per branch (like the current tabs), plus an all-branch view for admin.
- Spreadsheet feel: click a cell and type, keyboard navigation, dropdown chips, copy/paste, fill down.
- Auto-save on every cell, like Google Sheets; offline buffer if internet drops.
- Every row is a real visit in the database, so it automatically updates the patient profile; no double entry.
- Works on mobile and tablet (larger touch targets, horizontal scroll, frozen name column).
- Filters and sorting: by status, doctor, group, treatment, dues.

- Download any day/branch as Excel/CSV.

11.2 Columns (mapped from current sheet)

Current column	New system behaviour
Mr #	Auto-generated; typing a name/phone finds the existing patient
Patient Name	Linked to patient profile
Month / Monthly (e.g. 4, "04 Photo")	Braces month auto-calculated; photo months flagged automatically from the protocol
Treatment	Dropdown: Monthly, Checkup, Bonding, Braces Off, Retainer Impression, Retainer Pick, Crown Insertion, RCT, Scaling, Filling, X-ray, Veneers, Smile Makeover, Followup, etc.
Token No	Auto-assigned at check-in; drives the live queue
Waiting / Status	Scheduled / Waiting / In Treatment / Completed / Pending
Group	Doctor group (1, 2, 3) per braces protocol
Doctor's Name	Multi-select; only allowed groups selectable for braces months
Treatment Details (e.g. "U L 018 Pc Refresh")	Quick-tap fields: upper/lower wire size, power chain, o-rings, rebonded bracket numbers, extraction tooth numbers, cross arch, ligature, elastics, etc., plus free text
P.P (pending payment)	Calculated automatically from invoices and payments; no manual typing
Healthwire (Done/Pending)	Removed; no more double entry
Contact No	Pulled from patient profile; mandatory
Reminder Status	Linked to coordinator reminders

12. Live walk-in queue

- Most patients are walk-ins, so check-in assigns a token number and puts the patient in the branch's live queue.
- Queue board shows: token, name, braces month, treatment, status, assigned doctor, \$\$ flag, photo-due flag, Dr. Ali flag.
- Status flow: Scheduled, then Waiting, then In Treatment, then Completed.
- Assistants and doctors see the queue update live without refreshing.
- Average waiting time per branch can be reported later.

13. Braces treatment module (month-by-month protocol)

Based on the "Braces Treatment Module" document provided by Dr. Ali. When a braces patient checks in, the system reads their month and shows the assistant exactly what to do, who may treat, who must check, and which alerts apply.

13.1 Protocol table (as provided)

Month	Doctor group	Checked by	Main wire	Photo	Instructions
01	Group 1	-	O12	PHOTO	Ask treatment plan from Dr. Ali
02	Group 3	Group 2	O12	-	-
03	Group 3	Group 2	O14	-	-
04	Group 1 / 2	Group 1	O16	PHOTO	Decide and do extractions
05	Group 3	Group 2	O16	-	-
06	Group 3	Group 2	O16	-	-

Month	Doctor group	Checked by	Main wire	Photo	Instructions
07	Group 1 / 2	Group 1	O16	PHOTO	No extractions beyond this month; make sure all extractions are done
08	Group 3	Group 2	[TO CONFIRM]	-	Dues should be cleared; remind retainer payment
09	Group 3	Group 2	[TO CONFIRM]	-	-
10	Group 1 / 2	Group 1	[TO CONFIRM]	PHOTO	END non-extraction cases
11	Group 3	Group 2	[TO CONFIRM]	-	-
12	Group 1	Group 1	[TO CONFIRM]	PHOTO	END non-extraction cases
13	Group 1 / 2	Group 1	[TO CONFIRM]	PHOTO	-
14	Group 3	Group 2	[TO CONFIRM]	-	-
15	Group 1	Group 1	[TO CONFIRM]	PHOTO	Dues should be cleared; remind retainer payment
16	Group 3	Group 2	[TO CONFIRM]	-	-
17	Group 3	Group 2	[TO CONFIRM]	-	-
18	Group 1 / 2	Group 1	[TO CONFIRM]	PHOTO	END extraction cases
19+	[TO CONFIRM]	[TO CONFIRM]	[TO CONFIRM]	[TO CONFIRM]	Rule needed for overrun cases

13.2 What the system enforces

- **Who treats:** only doctors in that month's group can be assigned (e.g. a Group 3 doctor cannot be put on a Month 4 patient). Admin can override, and overrides are logged.
- **Who checks:** the checker group must sign off the visit before it is closed.
- **Planned wire** shown for the month; the actual wire used is recorded in treatment details.
- **Photo alert** on photo months; the visit cannot be closed until photos are uploaded.
- **Month 1:** alert to get the treatment plan from Dr. Ali; patient appears on Dr. Ali's list.
- **Month 4:** extraction decision required and recorded (extraction / non-extraction case).
- **Month 7:** warning that no extractions are allowed beyond this month; checks that all planned extractions are done.
- **Months 8 and 15:** dues must be cleared (ties into the pending dues hold) and retainer payment reminder shown.
- **Months 10/12:** target end for non-extraction cases. **Month 18:** target end for extraction cases.
- **Overrun flag:** non-extraction cases past their end month and extraction cases past Month 18 go to Dr. Ali's review list.
- Braces off, then automatically moves the patient into the retainer module.
- Treatment plan record per patient: braces type, extraction decision, expected duration, kit price (e.g. 55k / 70k / 80k / 120k kits seen in sheets).

14. Doctor groups

Group	Doctors (as provided)
Group 1	Dr Komal Rubab, Dr Samrah Khan, Dr Warda Javed
Group 2	Dr Urooj Jawed, Dr Mehwish Saleem, Dr Maheen Fatima, Dr Kainat Waheed
Group 3 - Karachi	Dr Hameeda Sharaf, Dr Haniya Siddiqui, Dr Mirha Siddiq, Dr Laiba Khan
Group 3 - Lahore	Dr Vaneeza Khan, Dr Duaa Nusrat, Dr Zunash Suhail, Dr Rida Jameel

- Groups are editable by admin; moving a doctor between groups updates who can be assigned.
- Groups shown as filters in the sheet view and reports.
- [TO CONFIRM] Spellings: list says "Warda Javed" and "Urooj Jawed"; sheets say "Verda Javed" and "Urooj Javed".
- [TO CONFIRM] Doctors seen in sheets but not in any group: Dr Aimon Aslam, Dr Shizah, Dr Rania, Dr Ali Ahmed, Dr Maham Waheed, Dr Aqsa Nadeem.
- [TO CONFIRM] Roles of Hira Anis and Anousha Khan (appear on visits; possibly assistants).

15. Retainer module (in-house)

Retainers are made in-house, so they get the same kind of tracking as braces.

- Stages: impression / scan, then fabrication, then ready, then delivery ("retainer pick"), then follow-up checks, then replacement if needed.
- Status and dates recorded for every stage; overdue stages alert the coordinator.
- In-house lab cost recorded against each retainer case.
- Retainer payment status linked to the reminders at braces Months 8 and 15.
- Repeat impressions (e.g. "Lower impression repeat") tracked with reason.
- Retainer follow-up schedule and reminders.
- Ties to the branded retainer box/case given to patients.
- [TO CONFIRM] Full retainer protocol (follow-up intervals, replacement policy, pricing) to be shared by Dr. Ali.

16. Doctor daily log and doctor accounts

- Each doctor logs in with their own email in the style name@dralirashid.com.
- Doctors record every patient they treated each day; builds a permanent record of each doctor's work.
- Most entries come automatically from the sheet view (doctor selected on the visit); the daily log lets doctors review and confirm.
- Doctor record shows: patients treated, procedures, revenue generated, complaints, redo cases, checker sign-offs.
- Feeds the doctor percentage calculation (Section 21).

17. Photos workflow and editing

17.1 Daily clinic photos

- Staff upload daily photos to a **Clinic Photos folder** visible only to the team (not patients, not visitors).
- Each upload is linked to a patient, visit date, branch and braces month.

- Raw originals are always kept untouched.

17.2 Editing by Claude

- Claude edits before/after and progress photos in the clinic's style, labels them, and files them to the right patient.
- **Dr. Ali will personally guide and teach the editing style.**
- Allowed edits: crop, straighten, colour, lighting, background tidy, labels/branding.
- **Never alter teeth or clinical results;** edited photos must remain truthful (avoids misleading advertising and protects credibility).
- Quality standard: crisp, realistic, premium; preserve original resolution.
- Labels: patient (internal), date, month, branch, view (front, left, right, upper, lower occlusal).

17.3 Delivery

- Edited photos uploaded to the patient's cloud record and visible in the patient portal.
- Sent to the patient by **email**. WhatsApp sending is skipped for now (would need the paid WhatsApp Business API).
- Can be automated as a daily scheduled task that processes the clinic photos folder. Upload back to Google Drive through the connector still needs testing.

17.4 Consent

- Consent checkbox per patient / per photo before any photo is used publicly (visitor section, social media).
- Patients without consent never appear outside their own portal.

18. Pending dues, the \$\$ flag and the treatment hold

- P.P (pending payment) is calculated automatically from invoices and payments; front desk no longer types it in.
- A **\$\$ symbol** appears on the patient profile and queue row when dues are pending. Visible to accountant, clinic coordinator and front desk (and others per access grid).
- **Treatment hold:** when a patient with dues is checked in, the assistant's screen shows "Clear dues first" so treatment does not start before the bill is cleared.
- [TO CONFIRM] Whether the hold is a hard block (doctor cannot start until cleared, override by admin/accountant) or a warning only.
- Dues checkpoints from the braces protocol (Months 8 and 15) are enforced here.
- Dues list per branch for the coordinator and accountant to follow up.

19. Invoices, installments and receipts

- Invoices created from visits/treatments; amounts are numbers only (no "35k" text).
- **Choice of invoice/bill templates:** Dr. Ali picks a clean, branded template; Claude sets it up.
- Printed receipts and PDF invoices (replacing Healthwire printing).
- Receipts and invoices emailed to patients; visible in the patient portal.
- **Installment plans** for braces:

- Total fee, amount paid, remaining balance, next installment date.
- \$\$ flag updates automatically based on the plan.
- Reminders for upcoming installments.
- Payment methods recorded (cash, bank transfer, card, etc.) per branch for cash closing.

20. Accountant module: income, expenses, branch P&L

- Accountant sees **all financials** across all branches.
- Expense entries tagged by **city and branch**, so branch-wise income and expenses are clear.
- **Expense categories:** accountant just selects a category; category list taken from Healthwire. [TO CONFIRM] export of the category list.
- Each expense: date, branch, city, category, amount, paid to, payment method, receipt photo, notes.
- Branch P&L: income vs expenses per branch, per city, per month, with trends.
- Revenue per branch calculated from branch-tagged visits.
- **Daily cash closing** per branch: front desk closes the day's cash, accountant verifies, any mismatch is flagged to Dr. Ali.
- Lab costs (external and in-house retainer lab) recorded against cases.
- Export to Excel/CSV and upload to clinic cloud with dates and branch in the file name.

21. Discounts, refunds and money protection

- **Front desk discount cap:** an upper limit per role, either a percentage or a maximum rupee amount (set by Dr. Ali).
- Discounts above the cap go to Dr. Ali or the accountant for approval.
- Invoice edits, voids and refunds allowed only for admin and accountant; every change is logged.
- **Audit log:** every edit or deletion records who did it and when (money and patient records).
- **Doctor percentage:**
 - Doctors receive a percentage for every patient they bring in.
 - System calculates payouts automatically from records.
 - Dr. Ali will explain the exact percentage rules later (whether on referrals, treated patients or both; same or varying %).

22. Clinic coordinator module

- **Lab work entries:**
 - Case sent, received, fitted; lab name; cost linked to the case.
 - Overdue lab cases alerted.
- **Follow-up reminders** and the time each patient's next appointment is due.
- **Missed appointment / drop-off list:** patients who haven't returned in X weeks, for the coordinator to chase.
- Braces patients running behind schedule flagged.
- Complaints inbox (shared with Dr. Ali).
- Low post-visit ratings alerted here.
- Sees \$\$ dues flag on profiles.

- Reminder status updated after contacting patients (called / no answer / booked).

23. Complaints system

- Every patient profile in the portal has a **"Report / Complain to Dr. Ali Rashid"** button.
- Patients can report or complain about anything (treatment, staff, billing, waiting time, etc.).
- Complaints go to **two inboxes**: Dr. Ali's admin inbox and the clinic coordinator's inbox.
- Each complaint has status (new, in progress, resolved), notes and response history.
- Complaints linked to the patient, branch and doctor; counted on doctor dashboards.

24. Dr. Ali Rashid review flag

- All employees can mark a patient: **"Please get your next appointment done by Dr. Ali Rashid."**
- Used whenever something seems wrong in a patient's treatment.
- Patient sees the message in their portal and knows to come on Dr. Ali's days (calendar on homepage).
- Flagged patients appear on Dr. Ali's list so he can see them as soon as possible.
- Flag records who raised it, why, and when it was cleared.

25. Inventory

- Stock per branch: brackets, wires (O12, O14, O16, O18 and others), power chains, o-rings, bonding material, consumables.
- Low-stock alerts per branch.
- Supplier reorder list (e.g. main supplier).
- Usage linked to visits where practical.

26. Dashboards, reporting and growth tracking

26.1 Dr. Ali's daily summary

- One screen: every branch's revenue, patients seen, dues outstanding, complaints, flags, cash closing status.

26.2 Doctor dashboard

- Patients seen, revenue generated, complaints, redo cases, checker sign-offs, percentage earned.

26.3 Growth

- "How did you hear about us?" on every new patient; reports show which marketing channel brings patients to each branch.
- Post-visit ratings (1 to 5) with low-rating alerts to the coordinator, catching problems before Google reviews.

26.4 Other reports

- Braces patients by month and branch.
- Photo compliance (photo months missed).

- Drop-offs and missed appointments.
- Expense breakdown by category and branch.

27. Data migration, export and backups

27.1 Migration sources

- **Healthwire:** all patients, visits, invoices, payments, dues, expenses, expense categories. Dr. Ali signs in through the browser; Claude reads and exports the records. If Healthwire offers Excel/CSV export, that is used first.
- **Google Drive:** existing patient records and photos.
- **Aaj ki List:** historical daily entries from every branch tab.

27.2 What gets moved into each patient profile

- Date of each visit.
- Treatment done.
- Which doctor did it.
- Photos: raw and edited.
- Invoices, payments and remaining dues.

27.3 Verification

- Counts must match: every patient, every invoice, every rupee of dues.
- Old branch-suffix names ("ABC lhr" etc.) converted to clean names plus branch tags.
- Duplicate patients merged carefully.

27.4 Export and backups

- All data easily downloadable (Excel/CSV/PDF) and uploadable to the clinic's own cloud, with dates and branch in the file names.
- Automatic daily backup exported to Google Drive.

28. Decisions log

Topic	Decision
Platform	Browser only; mobile + tablet + desktop
Healthwire	Replaced entirely; kept running in parallel until the website is perfect
Google Sheets	Kept running in parallel until the website is perfect
Rollout	All branches at once (not a pilot), protected by the parallel run
Auto-save	Yes, like Google Sheets, plus offline buffer
Branch tagging	Per visit, not just per patient
Pending payments	Calculated automatically; \$\$ flag; treatment hold
Discounts	Front desk cap (% or max rupees); above cap needs approval
Refunds / invoice edits	Admin and accountant only; logged
Audit log	Yes
Installment plans	Yes

Topic	Decision
Daily cash closing	Yes
Doctor percentage	Yes, for patients doctors bring in; rules to be taught later
Braces stage tracker	Yes, per the month-by-month protocol
Retainer tracker	Yes, in-house retainers
Missed / drop-off list	Yes
Lab case tracking	Yes
Inventory per branch	Yes
Doctor dashboard	Yes
Digital consent forms	Yes
Dr. Ali daily summary	Yes
Book consultation (WhatsApp link)	Yes
Cost ranges on visitor page	Yes
Photo editing	Crop/colour/lighting/labels only; Dr. Ali trains the style
Photo consent	Consent box per photo
Referral source tracking	Yes
Post-visit rating	Yes
Instant account shutdown	Yes
Security	Handled by Claude (see Appendix A)
Invoice template	Dr. Ali picks from branded options
Mr# generation	Built into the website
WhatsApp automated messages	Skipped for now
Patient login by phone + OTP	Later
Urdu labels for staff	Skipped

29. Open questions

- Braces: Month 10 and Month 12 both say "END non-extraction cases": a window or a typo?
- Braces: standard wire sequence for Months 8 to 18 (sheets show lots of 018).
- Braces: rule for Months 19+ (photos, groups, checks).
- Correct spellings: Warda/Verda Javed, Urooj Jawed/Javed.
- Group placement or roles for Dr Aimon Aslam, Dr Shizah, Dr Rania, Dr Ali Ahmed, Dr Maham Waheed, Dr Aqsa Nadeem.
- Roles of Hira Anis and Anousha Khan.
- Name of the "G..." tab and final list of branches (front desk has 5 options).
- Dues hold: hard block or warning only?
- Retainer protocol details.
- Expense category list (from Healthwire).
- Doctor percentage rules.
- Discount caps per role (% or rupee amount).
- Domain: is dralirashid.com already owned?
- Invoice template choice.

- Final ticks on the access grid.

30. Build plan, timeline and next actions

Phase 0 - Setup (Dr. Ali, about 30 minutes)

- GitHub account.
- Vercel: use Sign Up (not Log In), then Continue with GitHub, Hobby plan.
- Supabase: connected.
- Confirm domain ownership.

Phase 1 - Blueprint (Claude; Dr. Ali reviews)

- This document.
- Final access checkbox grid.
- Database design.
- Answers to the open questions.

Phase 2 - Core daily system

- Staff logins and roles.
- Patient profiles, auto Mr#, branch-per-visit.
- Aaj ki List sheet view with auto-save and live queue.
- Braces protocol enforcement.
- Dues hold, invoices and template.
- Doctor daily log, Dr. Ali flag, complaints inbox.

Phase 3 - Data migration

- Healthwire via browser (Dr. Ali signs in).
- Google Drive records and photos.
- Aaj ki List history.
- Count verification.

Phase 4 - Money

- Accountant panel, expense categories, branch P&L.
- Discount caps and approvals, cash closing, doctor percentage.

Phase 5 - Photos

- Clinic photos folder, editing style training, labelled before/after, email delivery.

Phase 6 - Public side

- Homepage with 3D smile, 3 buttons and calendar.
- Visitor pages.
- Patient portal.

Phase 7 - Go-live

- All branches at once, with Healthwire and Sheets in parallel.
- Staff training.
- Security review.
- Switch off Healthwire only after numbers match for a few weeks.

How we work

- Claude builds in chunks and sends preview links; Dr. Ali tests on phone, tablet and Surface and gives feedback.
- One or two staff test Phase 2 screens before everyone uses them.

Timeline (estimate, not a promise): roughly 6 to 10 weeks to full go-live. Biggest variables: how quickly questions are answered and previews tested, and how messy the Healthwire data turns out to be.

Next actions for tomorrow

- Create GitHub account and sign up on Vercel.
- Answer the open questions in Section 29.
- Review and tick the access grid in Section 8.
- Say "start Phase 1" to begin the build.

Appendix A: Security plan

- Role-based permissions enforced in the database itself (not just hidden buttons), using Supabase row-level security.
- Branch restriction: staff limited to their branch's data where set.
- Two-factor login for all staff accounts.
- Auto-logout after inactivity, important on shared clinic computers and tablets.
- Patients can only ever see their own records.
- Clinic photos folder and raw images private to staff.
- All traffic encrypted (HTTPS); files stored privately with expiring links.
- Audit log of every edit, deletion, permission change and login.
- Instant account shutdown for departing staff.
- Daily automatic backups, plus export to the clinic's own cloud.
- Claude never types passwords; logins (including Healthwire migration) are done by Dr. Ali.
- Independent security review recommended before full go-live.

Appendix B: Data quality fixes found in current sheets

- Many rows have no Mr#, so Mr# is now auto-generated.
- Many rows have no contact number, so phone is now mandatory.
- Amounts typed as text ("35k", "70k", "200k") cannot be totalled, so amounts are now numbers only.
- Headers differ between tabs ("Waiting" vs "Status", "Month" vs "Monthly", "Column 13"), so one standard layout everywhere.
- Photo months typed by hand ("04 Photo", "13 Photo"), so photo months are now automatic from the protocol.
- Doctor name spellings vary ("Dr." vs "Dr", Verda/Warda, Javed/Jawed), so a single doctor list is used.
- Healthwire "Done" column shows double entry, which is now eliminated.
- Patient names carry branch suffixes in Healthwire, so they are now replaced by branch tags.
